

VITA Compendium April 2024

Veneering

VITA – perfect match.

VITA

VITA – perfect match.

VITA

VITAVM®13

For full veneering of metal frameworks in the conventional CTE range

Product description

VITA VM 13 is a highly-esthetic, fine-structure feldspar ceramic that is perfectly adapted to the CTE value of conventional bonding alloys (approx. 13.8 – 15.2 $\mu\text{m}/\text{mK}$). Regardless of whether the conventional alloys are cast, milled or sintered.

VITA VM 13 provides a genuine alternative to all-ceramics – and is right at home wherever the masking effect of a metal framework is required.

The firing temperature (880°C, dentin firing) provides enormous processing reliability, particularly for alloys with a low solidus temperature (<1100°C).

The main components are pure-grade potash and albite feldspar materials that offer brilliant shade effects as well as unbeatable flexural strength values.

Thanks to its homogeneous, compact surface, VITA VM 13 supports outstanding grinding and polishing, particularly in situ. This ensures smooth and densely compact surface results.

Accumulation of plaque on the ceramic surface is significantly reduced, supporting the patient in caring for their high-quality restoration.

VITA VM 13 is a high-quality system component provided by the innovative VITA VM concept – the universal solution for all common indications. Metal-ceramics, all-ceramics or composite: the possibilities are endless!

VITA AKZENT Plus and VITA INTERNO stains are also available for individual finalization.

Features/Benefits

- Natural shade and light effects thanks to the fine structure
- Minimum shrinkage behavior for accurate firing
- Excellent modeling characteristics for fast and accurate application of the ceramic
- Comprehensive range of additional materials for excellent effects
- Efficient and cost-effective processing
- Can be individualized using VITA AKZENT Plus and VITA INTERNO
- Process reliability thanks to long-standing experience
- Available in VITA SYSTEM 3D-Master and VITA classical A1 – D4 shades

VITA VMK Master®

For full veneering of metal frameworks in the conventional CTE range

Product description

VITA VMK Master is a natural feldspar veneering ceramic for conventional bonding alloys (approx. 13.8 – 15.2 $\mu\text{m}/\text{mK}$).

Regardless of whether the conventional alloys are cast, milled or sintered.

Precise and reliable processing.

A master in terms of reliability, suitability for everyday use and esthetics – that's VITA VMK Master.

Features/Benefits

- A material that makes no compromises when it comes to reliability and esthetics
- Precise and reliable processing, allowing it to be learned quickly
- Excellent processing characteristics, such as improved modeling properties, simple handling and minimum shrinkage behavior
- Conventional, established dentin-incisal layering system
- Comprehensive range of additional materials for individualization
- Highly esthetic restorations thanks to brilliant colors
- Available in VITA SYSTEM 3D-Master and VITA classical A1 – D4 shades

VITA NP BOND

Effective CTE buffer between the ceramic and the metal alloy

Product description

Bonder for greater reliability and improved esthetics when veneering non-precious metal dental alloys. Through reliable bonding between the metal framework and the veneering ceramic (such as VITA VMK MASTER and VITA VM 13), VITA NP BOND helps prevent errors occurring as a result of CTE tension between the alloy and the ceramic.

VITA NP BOND (NP: non-precious) improves bonding between metal frameworks and veneering ceramics, particularly in the case of non-precious metal dental alloys, thus providing dental technicians with greater reliability in fabricating veneers that offer superior long-term stability and esthetics.

Features/Benefits

- Effective CTE buffer between the ceramic and the metal alloy, particularly in the case of non-precious metal alloys, provides for a stable bond between the framework and the ceramic
- Improves shade reproduction
- Saves time as firing with WASH OPAQUE is no longer necessary
- Thanks to the improved surface structure following BONDER firing, the opaquer can be applied more easily, effectively and evenly

VITA NP BOND PASTE, 5 g	BNPB5

VITA LUMEX® AC

Ideal shade fidelity. Excellent light dynamics. Precise processing.

Product description

- VITA LUMEX AC is a leucite-reinforced, glass-ceramic veneering system with an innovative material formula for vivid and reliable results with shade accuracy
- VITA LUMEX AC includes:
- GINGIVA, OPAQUE, OPAQUE DENTINE, DENTINE and ENAMEL materials, as well as a multitude of effect materials (e.g., OPAL TRANSLUCENT, FLUO INTENSE and much more)
- ideally matched system components such as brushes, firing trays, glazing materials, etc.

Features/Benefits

- Reliably reproduces tooth shades, as well as a natural play of shade and light, thanks to ceramic materials with very good shade fidelity and excellent light dynamics
- Process veneering ceramic efficiently and precisely, thanks to the ideal modeling properties, outstanding shape stability and universal applicability for all substructure ceramics
- Produce durable restorations, thanks to the high fracture resistance of the leucite-enhanced glass ceramic matrix and a reliable bond to the substructure

Not available in all markets. Official approval pending in some markets.

Indications

VITA LUMEX AC is a leucite-reinforced, glass-ceramic veneering system for veneering all common, full-ceramic substructure materials (zirconia, lithium disilicate and feldspar ceramics) and titanium substructures. For the production of restorations without a substructure (e.g., veneers).

Indication

Indication range:

- Full and partial veneering of zirconia
- Full and partial veneering of lithium disilicate
- Full and partial veneering of titanium grades 4 and 5
- Partial veneering of feldspar ceramic
- Reconstruction without a substructure

Materials:

- Zirconia substructures
- (CTE approx. 10.0 to 10.5 x 10⁻⁶ K⁻¹)
- Glass-ceramic substructures
- (CTE approx. 9.0 to 10.5 x 10⁻⁶ K⁻¹)
- Titanium substructures
- (CTE approx. 9.0 to 10.5 x 10⁻⁶ K⁻¹)

VITAVM®11

Fine-structure ceramic for individualization of VITA SUPRINITY PC*

Product description

VITA VM 11 is a low-melting, fine-structure feldspar ceramic that is adapted specifically for the individualization of restorations made of zirconia-reinforced lithium silicate glass ceramic. The optimum correspondence of both CTE ranges guarantees a bond that is tension-free, and in turn also reliable.

In combination with lithium silicate-type material, you can begin layering directly without liner firing or washbake, thanks to the excellent surface wettability of the new glass ceramic.

The high translucency and warm shade reproduction of VITA VM 11 combined with the opalescent effect of lithium silicate-type material facilitate highly esthetic results with a vivid play of colors.

Features/Benefits

- Natural shade and light effects thanks to the fine structure
- Excellent bonding ensures reliable results
- Easy handling for fast, highly-esthetic results
- Outstanding firing properties with dimensional stability retained even after repeated firing
- Excellent modeling characteristics for fast and accurate application of the ceramic
- Efficient and cost-effective processing
- Can be individualized using VITA AKZENT Plus and VITA INTERNO
- Process reliability thanks to long-standing experience
- Available in VITA SYSTEM 3D-Master and VITA classical A1 – D4 shades

Please note

* Can also be used for CELTRA® and CELTRA® CAD FC. CELTRA is a registered trademark of DeguDent GmbH.

VITAVM®9

Natural fine-structure feldspar veneering ceramic for zirconia frameworks and VITABLOCS Mark II

Product description

VITA VM 9 is a highly-esthetic, fine-structure feldspar ceramic that is perfectly adapted to the CTE value of zirconia frameworks (approx. 10.5, e.g. such as VITA YZ) – regardless of whether they are white, colored or translucent.

In addition, you can also use VITA VM 9 for individualizing restorations made from VITABLOCS Mark II.

The main components are pure-grade potash and albite feldspar materials that offer brilliant shade effects as well as optimum physical properties, such as extreme flexural strength values.

Thanks to its homogeneous, compact surface, VITA VM 9 supports outstanding grinding and polishing, particularly in situ. This results in smooth and densely compact surfaces.

Accumulation of plaque on the ceramic surface is significantly reduced, supporting the patient in caring for their high-quality restoration.

VITA VM 9 is a high-quality system component provided by the innovative VITA VM concept – the universal solution for all common indications. Metal-ceramics, all-ceramics or composite: the possibilities are endless!

VITA AKZENT Plus and VITA INTERNO stains are also available for individual finalization.

Features/Benefits

- Natural shade effects, light dynamics and optimum physical properties thanks to the fine structure
- Excellent bonding for reliable results and long-term success
- Minimum shrinkage behavior for accurate firing
- Excellent modeling characteristics for fast and accurate application of the ceramic
- Comprehensive range of additional materials for excellent photo-optic effects
- Can be individualized using VITA AKZENT Plus and VITA INTERNO
- Process reliability thanks to long-standing experience
- Available in VITA SYSTEM 3D-Master and VITA classical A1 – D4 shades

VITAVM® LC

Light-curing, microparticle composite for extraoral use with fixed and removable restorations

Product description

VITAVM® LC & VITAVM® LC flow

Simple to use. Cost-effective and esthetic results. Versatile range of applications: the VITA VM LC product family meets all your expectations when it comes to a veneering composite for the extraoral fabrication of restorations.

Whether it's in the form of a paste composite, the low-viscosity flow materials or freely combined, VITA VM LC offers brilliant results. VITA VM LC is also incredibly similar to ceramic.

Features/Benefits

- Two forms of processing for almost unlimited possibilities
- Perfectly tailored to suit any indication
- Brilliant esthetics with excellent shade reproduction based on the original VITA shade formula
- Outstanding material properties
- System-based, modular product range for efficient design options

Indications

Indication:

- Full and partial veneering of metal frameworks: crowns, bridges, telescopic crowns, implant suprastructures
- Inlays, veneers

Application areas:

- Individualization and layering-over VITA ENAMIC
- Veneering partially yttrium-stabilized ZrO₂ frameworks (CTE approx. 10.5 · 10⁻⁶ · K⁻¹), such as VITA YZ
- Individualization of VITA denture teeth
- Reproduction of gingival areas
- Veneering of removable and partially removable dentures (according to the manufacturer's information) made of
 - polyether ether ketone (PEEK) with a filler content of up to 20%, such as BioHPP/Bredent
 - PEEK-OPTIMA® LT1 polymer, such as, Juvora, InnoBlanc Medical

Long-term temporaries:

- Individualizing and layering-over long-term temporaries made from VITA CAD-Temp
- Metal-free crowns and three-unit anterior bridges made from VITA VM LC

Shades

Available in VITA SYSTEM 3D-MASTER® and VITA classical A1–D4® shades

VITAVM® LC PRIMER

VITA VM LC PRIMER is a bonding agent for light-curing veneering composites.

Product description

VITA VM LC PRIMER is a bonding agent for surface conditioning.

As a two-step bonding agent system, VITA VM LC PRIMER enables reliable bonding between veneering composites and dental substructure materials.

VITA VM LC PRIMER I & II can also be used separately with specific materials. However, when combined, they enable even more effective bonding. When doing so, follow the recommended indications.

VITA VM LC PRIMER supplements the light-curing microparticle composite VITA VM LC for extraoral fabrication of restorations.

Features/Benefits

- Economic advantage, thanks to a variety of indications
- Dependability, thanks to strong bonding
- Process reliability, thanks to simple handling

Indications

- Adhesive bonding of metal substructure surfaces (non-precious metal alloys, PM alloys, titanium) with (meth-)acrylate-based resins/composites
- Adhesive bonding of ZrO₂ substructure surfaces with (meth-)acrylate-based resins/composites
- Adhesive bonding of cross-linked composites/resins, such as VITA CAD Temp or of high-performance polymers (PEEK, PEKK)

VITAVM®CC

Filler-free cold-curing polymer resin for extra-oral fabrication

Product description

VITA VM CC is a filler-free cold-curing resin. It is the ideal material for the fabrication of indirect temporary restorations.

VITA VM CC exhibits excellent processing characteristics. Processing is particularly simplified thanks to the exceptional mixing behavior and the superior flow properties.

Accumulation of plaque can be considerably reduced since the material can be easily polished and features a homogeneous structure. The smooth surface of the temporary restoration is pleasant to the patient and offers superior wearing comfort.

Features/Benefits

- Outstanding flowability
- First-rate mixing behavior
- Easy polishing
- Greater color stability than comparable systems
- The ideal combination of bending strength and elasticity modulus ensure
- extreme material stability and lower fracture rates
- Bubble-free curing, with or without pressure pot

Indications

- Fabrication of temporary crowns and bridges
- Fixation of VITA denture teeth, e.g. on CoCr structures
- Repairs
- Covering of attachments in combined restorations

VITA SPRAY-ON

Product description

VITA SPRAY-ON system is for spraying dental ceramic opaque materials onto metal frameworks.

A compressed air spray gun is used to spray on a uniformly thin covering layer of opaque material. Materials which have already been mixed can be kept in the glass bottles supplied with the system until they have been completely used up.

Adaptors of varying diameters are supplied for connection to suction units.

Features/Benefits

- Extremely time-saving
- Produces a uniform and extremely thin covering
- Achieves optimal bonding with metal framework
- Considerably reduces costs
